Find a business:

I'd like to use the google business api for the search here. I have yet to do this so if someone does know how to do this I'd really like you to undertake that.

Registration Page

I want to register as a...

☐ Business ☐ Client

username password password confirm

username password password confirm

I'd like whatever radio button is chosen to populate the corresponding registration inputs on the page.

Business Name Here

Business Info

Using the google business API, I'd like to populate business info and the the corresponding good reviews underneath. i.e business hours, how long they've been open, pictures, and an explanation of their services. If time allows, it'd also be cool to show location on the google maps api.
